Educational Flow Chart

Agricultural/Bio-Resource Engineer

NOC 2148

Agricultural and bio-resource engineering integrates engineering science and design with biological sciences. Bio-resource engineering includes the design, construction, operation, maintenance, remediation and upgrading of systems related to agriculture and food processing. They develop efficient and environmentally-sensitive methods of producing food, fiber, timber, bio-based products and renewable energy sources for an ever-increasing world population.

Agricultural engineers may specialize in areas such as the relationships among organisms and their environments, soil and water, structures and environments, power and machinery, electronic and computer applications, or electrical power and processing¹.

Places of Employment²:

- Consulting Engineering firms
- Educational Institutions
- Governments
- Industry
- Research Facilities

Employment Requirements²:

- A bachelor degree in an appropriate engineering discipline is required
- A masters degree or doctorate in a related engineering discipline may be required for some positions
- Licensing by a provincial or territorial association of professional engineers is required to approve engineering drawings and reports, and to practise as a professional engineer
- Engineers are eligible for registration following graduation from an accredited educational program, and after three or four years of supervised work experience in engineering and passing a professional practice examination².

Local Educational Programs:

Minimum education required for this position is 4 years post-secondary education

Program	Length	Certification	Institutions
Engineering	4 years	Bachelor of Engineering	University of Guelph
Engineering	4 years	Bachelor of Engineering	University of Toronto
Engineering	4 years	Bachelor of Engineering	Ryerson University
Engineering	4 years	Bachelor of Engineering	University of Waterloo

Most important skills for occupation²:

- Learning ability - to design and develop criteria for the manufacture and construction of machinery, equipment, structures, systems and facilities related to agriculture and food processing
- Verbal ability/communication skills to solve problems with fellow engineers
- Numerical ability - conduct analysis of data, and to design sensing, measuring and recording devices
- Spatial perception - to prepare design specification for systems and facilities
- Innovative interest - to develop criteria and specification for the design, manufacture and construction of equipment, structures and facilities
- Ability to work precisely
- Interest in supervising

The most important High School subjects are²:

- Math
- Sciences

Agricultural Chemists

NOC 2112

Agricultural chemistry is a science concerned with means of affecting chemical and biochemical processes in the soil and plants, with the mineral nutrition of plants and with the use of fertilizers and other chemical means to improve soil and increase yield, therefore improving sustainability. Agricultural chemistry also deals with several other means of increasing yield, such as herbicides and growth stimulants, and serves as the scientific basis for introducing chemical processes into agriculture. In its aims, methods, and subject areas of research, agricultural chemistry is related to both the chemical and the biological sciences. It is also closely related to soil science, farming, meteorology, plant physiology and biochemistry, agricultural microbiology, physics, and chemistry. Its primary subdivisions are plant nutrition, the interaction of soils and fertilizers, evaluation of particular types and kinds of fertilizers and the methods of applying them, soil improvement by chemical means - for example, the application of lime or gypsum and research into and use of chemicals for weed control. There is a specific area within agricultural chemistry that has direct implications for sustainable agriculture: the field of bio-pesticides^{1,7}.

Places of Employment²:

- Agricultural chemists are employed in government agencies, such as Agriculture and Agri-Food Canada (AAFC), in industry, and in academia, because agricultural chemistry is a very active area of research, classroom teaching, and outreach.
- Food companies that are involved in genetically modified foods.
- Agricultural divisions of large chemical. The increase in environmental regulations has created opportunities in environmental chemistry work within the agricultural chemicals industry.

Employment Requirements²:

- A Ph.D. in chemistry is the most common requirement for the agricultural chemicals field, although an advanced degree is not a prerequisite for nonresearch support positions. A Ph.D., however, generally gets an individual more complex and challenging research assignments earlier in his or her career.
- Agricultural chemists recommend that students take courses in biology, biochemistry, human toxicology, water and soil chemistry, and geology.
- Knowledge of computers
- A course in research ethics is strongly suggested.
- Completion of a degree program in environmental sciences

Local Educational Programs:

Requirements: A bachelor's degree in chemistry, biochemistry or in a related discipline.

- A master's or doctoral degree is usually required for employment as a research chemist.
- Licensing by a provincial association of chemists is compulsory in Quebec and available but voluntary in Ontario

Program	Length	Certification	Institutions
Environmental Science	5 year Co-op	Bachelor of Science in Environmental Science	University of Guelph
Environmental Science	4 years	Bachelor of Science, Honours Specialization in Environmental Science	University of Western Ontario
Environmental Chemistry Specialist	4 Years	Bachelor of Science in, Specialization in Environmental Chemistry	University of Toronto
Professional Master of Environmental Science	1 Year	Master of Environmental Science	University of Toronto
Master of Environmental Science	1 Year	Master of Environmental Science	University of Guelph

Most important skills for occupation²:

- Verbal ability/communication skills - participate in interdisciplinary research and development projects working with chemical engineers, biologists, microbiologists, agronomists, geologists and other professionals; and to prepare laboratory and research reports
- Numerical ability - conduct programs of sample data collection and analysis in order to identify and quantify environmental toxicants

Agricultural Chemists

NOC 2112

- Spatial Perception – visualize chemical reactions and changes to properties
- Synthesizing information to conduct research to develop new chemical formulations and processes and to devise new technical applications of industrial chemicals and compounds
- Precision working with instruments

The most important High School subjects are²:

- Sciences
- Math
- English

Agricultural Commodity Inspector

NOC 2222

Agricultural commodity inspectors ensure that agricultural products meet the production, storage and transportation standards set by federal and provincial agriculture departments. Individuals in this occupation conduct inspections, checking the sanitation, quality control and food safety programs¹.

Places of Employment²:

- Farms
- Pesticide manufacturing plants (sustainable branch)
- Nurseries
- Fertilizer manufacturers

Employment Requirements²:

- A high school diploma is the minimum educational requirement for this position. Related experience or training is needed if only a high school diploma is held
- A related post-secondary diploma or degree (in agriculture or food science) is an asset

Local Educational Programs:

Program	Length	Certification	Institutions
Agriculture	4 years	Bachelor Degree	University of Guelph
Industrial Food Technology	8 Courses	Post-Secondary Diploma	Seneca College
Food Science Technology	3 years (4 Semesters)	Ontario College Advanced Diploma	Centennial College (Morningside Campus)

Most important skills for occupation²:

- General Learning ability to inspect agricultural products and ensure they conform to production, storage and transportation standards
- Verbal and numerical ability to analyze data and prepare reports on crop production
- Form perception to recognize defects in vegetables
- Manual dexterity to inspect the vegetables
- Methodical interest in handling the plants during processing to establish size, quality and grade of product
- Innovative interest in analyzing data collected during inspection, and examining specimens to detect or identify diseases
- Directive interest in speaking with growers, farmers and shippers regarding methods of culture, registration requirements, eradication of diseases and sustainability of crops

The most important High School subjects are²:

- Grade 12 English
- Grade 12 Math
- Grade 12 Science

Number of Employees by Age Range³:

Agricultural Equipment Technicians

NOC 7312

Heavy-duty equipment technicians repair, overhaul and maintain mobile heavy-duty equipment used in construction, forestry, mining, landscaping, land clearing and farming. Since these machines are used extensively in the harvesting process of food production, the sustainability of these vehicles play a large role in the overall sustainability of the food production process¹.

Places of Employment²:

- Heavy Agricultural Equipment Dealers

Employment Requirements²:

- Completion of high school is required
- Additionally:
 - Completion of a 3-5 year apprenticeship program, or
 - Combination of over 4 years work experience in the trade and high school, college, or industry courses in heavy equipment repair is required to be eligible for trade certification

Local Educational Programs:

Program	Length	Certification	Institutions
Agriculture and Heavy Duty Equipment Technician	2 year (two 8 month periods)	Ontario College Diploma	University of Guelph Kemptville College
Heavy Duty Equipment Technician (Co-op Apprentice)	3 Year (6 semesters)	Ontario College Diploma	Centennial College
Heavy Equipment Operator	12 Week Program	Post Secondary Certificate of Successful Completion	Fleming College

Most important skills for occupation²:

- General learning ability to check agricultural equipment for proper sustainable performance
- Form perception to inspect equipment and detect faults and malfunctions
- Motor co-ordination to perform repair work on agricultural/harvesting equipment as required
- Manual dexterity to test repaired equipment for proper performance and to ensure they meet sustainability requirements. May also fit machinery with sustainable components
- Objective interest in precision working with hand and power tools to adjust equipment and repair/replace defective components.
- Methodical interest in performing routine maintenance work
- Innovative interest in analyzing to diagnose faults and malfunctions in equipment, using computerized and other testing equipment to analyze the sustainable performance of machinery.

The most important High School subjects are²:

- Completion of Grade 12
- Participation in the Ontario Youth Apprenticeship Program (registered apprentices while finishing the last two years of high school)

Number of Employees by Age Range³:

Employment Distribution by Age	% of Total	All Occupations

Agricultural Geneticist

NOC 2121

Agricultural genetics is the study of disease resistance in plants and animals and other genetic improvements in crops and stocks to improve the sustainability in the food production process. The role of DNA (deoxyribonucleic acid) is central to this study. This is generally a laboratory/research intensive career¹.

Places of Employment²:

- Crop Production Farms

Employment Requirements²:

- Must have an advanced degree in genetics or a related field such as biology or biochemistry
- Most begin studies with the completion of a 4 year Bachelor of Science (B. Sc.) degree in a biological science. This is the minimum requirement to work as a genetics technician.
- Further advancement is usually required, with the completion of a Master's (M. Sc.) or Doctoral (PhD) degree in genetics. This is the minimum requirement to work in higher level independent research positions.

Local Educational Programs:

Listed below are undergraduate Bachelor of Science programs. Subsequent master's and doctoral programs can be found at the universities listed.

Program	Length	Certification	Institutions
Molecular Genetics	4 Year	Bachelor of Science	University of Toronto
Biology	4 Year	Bachelor of Science	Ryerson University
Biochemistry	4 Year	Bachelor of Science	York University

Most important skills for occupation²:

- Interest in biology
- Aptitude for mathematics
- Problem solving skills
- Curiosity and imagination
- Persistence and patience in a laboratory setting
- Good communication skills
- Manual dexterity for performing experiments
- Ability to pay close attention to detail
- Willingness to keep up to date with research publications and to keep up with new developments and discoveries in a rapidly advancing field
- Should enjoy synthesizing information, finding innovative solutions to problems using sophisticated instruments and equipment to perform tasks requiring precision.

The most important High School subjects are²:

- English
- Math
- Sciences

Agricultural Farmers and Farm Managers

NOC 8251

Farmers and farm managers manage the operations and functions of a farm. They are responsible for growing crops, raising and breeding livestock, poultry and other animals and marketing farm products. It is the responsibility of the agricultural manager to mimic as closely as possible the complexity of a healthy and natural ecosystem. Goals of a agricultural manager include providing a more profitable farm income and promoting environmental stewardship through reducing input, choosing ecological pest and weed management strategies, introduce nutrient cycles to maintain soil fertility. Sustainable agricultural managers have the responsibility of maintaining the productivity and usefulness of the farming yield indefinitely¹.

Places of Employment²:

- Self-employment
- Crop production farms

Employment Requirements²:

- Extensive farming experience is needed. Previous work as a farmer, farm supervisor or family farm work is usually required
- College diploma in agriculture may be required

Local Educational Programs:

Program	Length	Certification	Institutions
Agriculture	2 years	Post Secondary Diploma	University of Guelph - Kemptville Campus or Ridgetown Campus
Sustainable Agriculture	1.5 Years (3 semesters Co-op)	Ontario College Graduate Certificate	Fleming College - Lindsay

Most important skills for occupation²:

- Verbal ability to create marketing programs
- Numerical ability to develop and keep financial production records
- Ability to operate machinery
- Ability in co-ordinating information to plant, cultivate and harvest crops according to a nutrient cycle

The most important High School subjects are²:

Agricultural Products Processing Machine Operator

NOC 9461

Agricultural products processing machine operators run machines that process and package food and beverage products. These individuals are concerned with the sustainability of the packaging process, minimizing waste from this portion of food processing¹.

Places of Employment²:

- Food and beverage processing establishments
- Fruit and vegetable processing plants
- Meat plants
- Flour mills
- Breweries

Employment Requirements²:

- Completion of secondary school required
- On-the-job training is provided
- Experience as a machine operator, food and beverage processing, is usually required for process control operators

Local Educational Programs:

Program	Length	Certification	Institutions
Food Processing Operator – Food Manufacturing (Apprenticeship)	300 Hours	Ontario College Certificate	Conestoga College
Industrial Food Technology	2 years	Ontario College Certificate	Seneca College

Most important skills for occupation²:

- General learning ability to operate multi-function process control systems and equipment to process and package food and beverage products
- Form perception to observe gauges, computer printouts and video monitors
- Motor co-ordination and manual dexterity to adjust temperature and pressure controls, and turn valves to start machines and processing equipment
- Innovative interest in proposing and implementing adjustments to processing to achieve greater levels of sustainability
- Manual dexterity

The most important High School skills are²:

- Completion of basic high school subjects, most knowledge comes from on-the-job training

Number of Employees by Age Range³:

Employment Distribution by Age	% of Total	All Occupations
15 – 24 years	10.5%	14.1%
25 – 44 years	45.7%	45.1%

Agricultural Researcher

NOC 2123

These professionals provide advice and services related to agricultural and environmental science and technology. They apply scientific principles to the cultivation, production, utilization and improvement of plants and animals, and the management of associated resources. The fields they are employed in ranges from farming, food processing, packaging, transportation and marketing to the protection of soil, water, plant and wildlife resources¹.

Places of Employment²:

- Federal, provincial, municipal government departments
- Manufacturers and suppliers of agricultural production inputs (fertilizers, pesticides, feedstuffs, seeds, livestock)
- Farm business advisory services
- Financial institutions
- Agri-food companies
- Agricultural producers
- Conservation authorities
- Educational institutions
- Consulting firms
- Land reclamation companies
- Environmental companies

Employment Requirements²:

- A bachelor's or master's degree in agriculture or in a related science is required
- Membership or eligibility for membership in a provincial agricultural institute is usually required

Local Educational Programs:

Program	Length	Certification	Institutions
Agriculture	4 year	Bachelor of Science (Agriculture)	Ontario Agricultural College (University of Guelph)
Agriculture and Biological Science	4 Year	Bachelor of Science	University of Toronto
Associate Diploma in Agriculture	2 year (3 semesters)	Ontario College Diploma	Ontario Agricultural College (Alfred, Kemptville and Ridgetown Campus)
Sustainable Agriculture	4 Year	Bachelor of Arts	Trent University

Most important skills for occupation²:

- Intellect, curiosity, creativity, patience and perseverance required to solve complex problems and keep technical knowledge up to date
- Good oral and written communication skills
- Good organizational skills
- Good analysis and problem solving skills
- Interpersonal skills
- Leadership skills
- Conflict management skills
- Ability to work independently or as part of a team

Entomologists

NOC 2121

Entomologists are a smaller classification of the larger biologist and related scientists group. This group conducts basic and applied research to extend knowledge of living organisms, to manage natural resources, and to develop new practices and products related to agriculture. Specifically, Entomologists study the classification, biodiversity, life cycles and ecology of insects and other arthropods, and plan and implement surveys and sustainable pest management programs. For example, entomologists employed by the Canadian Food Inspection Agency work to prevent the spread of invasive invertebrates in a sustainable manner¹.

Places of Employment²:

- Educational institutions
- Municipal, provincial and federal government
- Technical Sales Specialists
- Chemical Industries
- Managerial Positions

Employment Requirements²:

- Minimum of a Bachelor's degree in biological sciences or agriculture.
- A graduate degree (master's or doctoral degree) is required for employment in research positions in universities, governments and industrial organizations

Local Educational Programs:

Program	Length	Certification	Institutions
Biological Science	4 Years	Bachelor of Science	York University
Biological Science	4 Years	Bachelor of Science	Ryerson University
Agriculture	4 Years	Bachelor of Science	Ontario Agricultural College (University of Guelph)

Greenhouse Operator

NOC 8254

Greenhouse operators run wholesale and retail horticultural firms ranging in size from small family businesses to operations employing over fifty people. They may deal with all kinds of plants and produce, or specialize in a particular type. These professionals use their background training in horticulture, or other related environmental fields, to determine the proper sustainable environmental conditions required to grow the selected crops and plants. They are involved in the full growth process, and implement strategies to ensure a sustainable crop is produced¹.

Places of Employment²:

- Agricultural companies
- Service firms to agriculture
- Greenhouses
- Nurseries (lawn and garden centers)

Employment Requirements²:

- Minimum 2 years post-secondary education/training
- Completion of a college program in horticulture is usually required
- Experience as a nursery or greenhouse supervisor is required

Local Educational Programs:

Program	Length	Certification	Institutions
Horticulture	2 years (8 month semesters)	Post-Secondary Diploma	Ontario Agriculture College (University of Guelph) – Kemptville Campus
Environmental Landscape Management	2 Years (8 month semesters)	Post-Secondary Diploma	Seneca College
Landscape Technician	2 Years (4 semesters)	Post-Secondary Diploma	Humber College

Most important skills for occupation²:

- General learning ability – manage the operations of nurseries and greenhouses and to establish the environmental conditions required to grow
- Verbal and numerical ability
- Interest in supervising
- Methodical interest in co-ordinating

The most important High School skills are²:

- Sciences
- Math
- English
- Geology

Hydrogeological and Geotechnical Engineer

NOC 2144

Geotechnical engineers work with geologists, other scientists and engineers to solve engineering and environmental problems. They investigate the engineering feasibility of planned projects, and help design cost-effective solutions to problems while maintaining recognized standards. They usually specialize in a particular type of work such as land remediation, rock mechanics or groundwater hydrology. Their role in sustainability stems from how heavily geotechnical engineers rely on resources. It is known as one of the most resource intensive disciplines in civil engineering. Design and construction related to geotechnical engineering consumes a vast amount of resources and energy, thus improving the sustainability of geotechnical processes is important for achieving an overall sustainable development. Being conscious of resource efficiency is at the center of sustainability in this career¹.

Places of Employment²:

- Governments
- Engineering consulting companies
- Educational and research institutions
- Mining companies

Employment Requirements²:

- A bachelor's degree in geological engineering or in a related discipline (civil) is required
- A master's degree or doctorate in a related engineering discipline may be required
- Licensing by a provincial or territorial association of professional engineers is required to approve engineering drawings and reports and to practise as a Professional Engineer (P. Eng.)
- Engineers are eligible for registration following graduation from an accredited educational program, three or four years of supervised work experience in engineering and passing a professional practice examination.

Local Educational Programs:

Minimum 4 years post-secondary education (bachelor degree, with selected relevant courses such as civil engineering and chemical engineering)

Program	Length	Certification	Institutions
Geological Engineering	4 years (co-op)	Bachelor of Applied Science (B.A.Sc.)	University of Waterloo
Civil Engineering	4 years	Bachelor of Applied Science (B.A.Sc.)	University of Toronto
Civil Engineering	4 year or 5 year (1 year IIP program)	Bachelor of Engineering (B. Eng.)	Ryerson University
Civil and Environmental Engineering	4 years	Bachelor of Engineering Science	University of Western Ontario
Civil Engineering and Environmental Engineering (separate programs)	4 years	Bachelor of Applied Science (B.A.Sc.)	University of Windsor
Chemical Engineering	4 years	Bachelor of Applied Science (B.A.Sc.)	University of Waterloo
Chemical Engineering	4 years	Bachelor of Applied Science (B.A.Sc.)	University of Toronto
Chemical Engineering	4 years	Bachelor of Engineering	Ryerson University

Most important skills for occupation²:

- Must have good oral and written communication skills
- Strong math and science skills
- Have a practical and creative approach
- Ability to visualize 3D objects from 2D drawings
- Analytical skills

The most important High School subjects are²:

- Sciences
- Math

Hydrologist

NOC 2113

A hydrologist is a scientist who researches the distribution, circulation and physical properties of underground and surface waters. He or she may help environmental scientists and other scientists preserve and clean up the environment or may search for groundwater. The proper use and conservation of water during the food production process is an important environmentally-friendly aspect of this occupation.

Hydrologists study the quantity, distribution, circulation, and physical properties of underground and surface waters. Often, they specialize in either underground water or surface water. They examine the form and intensity of precipitation, its rate of infiltration into the soil, its movement through the earth, and its return to the ocean and atmosphere. Hydrologists use sophisticated techniques and instruments. For example, they may use remote sensing technology, data assimilation, and numerical modeling to monitor the change in regional and global water cycles. Some surface-water hydrologists use sensitive stream-measuring devices to assess flow rates and the quality of water. The work hydrologists do is particularly important in flood control and environmental preservation, including groundwater decontamination¹.

Places of Employment²:

- Consulting firms – advising and helping businesses and government agencies comply with environmental policy. Their focus is particularly on ground-water decontamination and flood control. They can also provide services in environmental risk assessment.
- Federal and provincial governments
- Educational Institutions

Employment Requirements²:

- Adequate for entry-level jobs: Bachelor's degree in Earth Science
- Preferred: Master's degree
- For high-level research positions, or teaching positions: Ph. D is required
- To enter this occupation, candidates normally require a bachelor's degree in a discipline related to earth science, geology or geophysics. A Master's degree in geology, earth sciences and hydrology is an asset, and fast becoming a requirement.

Local Educational Programs:

- Bachelor's degree in Earth Science, geology, geochemistry, geophysics or related fields is the basic requirement.

Program	Length	Certification	Institutions
Earth Science or Geomatics Engineering	4 year	Honours Bachelor of Science	York University
Environmental Geosciences or Geology and Physics	4 Year	Bachelor of Science	University of Toronto

Most important skills for occupation²:

- General learning ability: To conduct theoretical and applied research to extend knowledge of surface and subsurface features of the earth, its history and the operation of physical, chemical and biological systems that control its evolution; and to conduct geological and geophysical studies for regional development, site selection and the development of public works projects
- Verbal Skills: Prepare assessment reports and plan, direct and participate in analysis of data
- Numerical Ability: develop and use software to analyze and interpret data
- Spatial Perception: Assess the movement of ground and surface waters and identify natural environmental risks such as slope erosion, landslides, soil instability
- Interest in Precision Working: With instruments to identify deposits of construction materials, and in participating in remote sensing programs and in analyses of core samples, drill cuttings and rock samples to identify chemical composition
- Directive interest in consulting

The most important High School subjects are²:

- 12 U English
- Calculus and Vectors (MCV4U)
- Physics (SPH4U)
- Advanced Functions (MHF4U)
- Chemistry (SCH4U)

Organic Farm Workers

NOC 8253

Organic farm workers implement organic farming systems that rely on ecologically based practices, such as cultural and biological pest management, and virtually exclude the use of synthetic chemicals in crop and animal production. In addition, the use of antibiotics and hormones in livestock production is prohibited. Genetically modified crops such as those containing genes that express toxins or confer herbicide resistance are not allowed. In organic farming systems, the fundamental components and natural processes of ecosystems, such as soil organism activities, nutrient cycling, and species distribution and competition, are used to work directly and indirectly as farm management tools¹.

Places of Employment²:

- Food production/crop farms

Employment Requirements²:

- Organic farm supervisors and workers may require a college certificate or other specialized training in agriculture

Local Educational Programs:

- General agriculture programs are offered at the college and undergraduate level.
- This program focuses on the general principles and practice of agricultural research and production and that prepares individuals to apply this knowledge to the solution of practical agricultural problems. These programs include courses in basic animal, plant, and soil science; animal husbandry and plant cultivation; soil conservation; and agricultural operations such as farming, ranching, and agricultural business.

Program	Length	Certification	Institutions
Agriculture	2 years	Post-secondary diploma	Kemptville College
Agriculture	2 years	Post-secondary diploma	Ridgetown College
Agriculture	4 years	Bachelor of Science in Agriculture - B.Sc.(Agr.)	University of Guelph

Most important skills for occupation²:

- 0-2 years experience required
- General farm duties
- Maintain quality control and production records
- Innovative interest in co-ordinating information to develop work schedules and establish environmentally friendly procedures

The most important High School skills are²:

- Ability to work with others, oral communication, problem-solving, reading, numeracy, job task organization

Soil Fertility Scientist (Biological Research Scientist)

NOC 2115

Soil scientists study the composition, distribution, development and behaviour of soils, the interaction of soils with plants, and the management of soil resources for agriculture production and environmental protection. They study the properties of soils, processes that occur in soil (physical, chemical, biological) and the positive and negative effects of human activity on soil quality. They develop methods to conserve and manage soil for future generations and develop plans to fix contaminated soils and reclaim disturbed soils. They apply knowledge of soil science in areas related to crop or plant productivity, environmental protection and biological conservation¹.

Places of Employment²:

- Post secondary education institutions
- Federal, provincial and municipal government departments and research centers
- Industrial establishments
- Fertilizer companies
- Engineering and land appraisal firms
- Coal, oil, gas and forestry companies
- Consulting firms
- Environmental remediation and reclamation positions are in high demand for those with soil science training

Employment Requirements²:

- New graduates can work on a seasonal basis until they gain job experience
- Doctoral degrees are usually required to direct and administer research programs or to teach at the university level

Local Educational Programs:

- 4 year post-graduate degree
- Bachelors degree in agriculture, forestry, biological, earth or environmental sciences with a specialization in soil science
- Research positions require a master's or a doctoral (PhD) degree
- Must be up to date with provincial and federal legislation

Program	Length	Certification	Institutions
Environmental Science	4 years	Bachelor of Science, Honors Specialization in Environmental Science	University of Western Ontario
Environmental Science	4 years	Bachelor of Science in Environmental Science	University of Guelph
Environmental and Resource Studies/Science		Bachelor of Science or Bachelor of Environmental Science/Studies	Trent University
